Portfolio: https://macparthum.github.io/

Easy going, level headed and curious Full-Stack Web Developer that leans toward front end work. Holds a professional certification in Full Stack Web Development and over 200 hours classroom experience of developing full stack applications using technologies such as HTML, CSS, and React. Strategic problem solver who enjoys working in a team environment towards long term web design solutions.

LANGUAGES AND SKILLS:

HTML , CSS, JavaScript, JQuery, Responsive Design, Bootstrap, React.js, MySQL, MongoDB, Express, User Authentication and Security and Session Storage

PROJECTS:

Project 1: Our team objectives were to design an app with two API's working together using the agile method. We used Bulma as our CSS framework to create the UI. The app decides if you would like to go out to eat or cook at home based upon a boolean value generated by our first API the coin flip. After a result is generated based on a on.click event by the user they are presented with five recipes with pictures of the dish and links to the recipes in an external database.

GitHub Repository: https://github.com/MacParthum/Indecisive_Cook

Project 2: Our group created an app that uses the US Postal Service zip code database and Mapbox to create an app that allows a user to plan a move by comparing and writing reviews on a particular zip code. We used Handlebars to dry up the code and simplify the design. This app has working maps that show the largest city in the zip code where you blog about.

GitHub Repository: https://github.com/MacParthum/Greener_Grass

Project 3: Our group created a travel blog using Express, Passport and React where the user can blog about places they have traveled using images from the web. . Cool feature about this site is that it uses CSS to enable the user to switch background images to create a light or dark mode.
